# COLLEGE PLACE INDUSTRIAL COMPLEX

## 8 INCH 800 PSI NATURAL GAS

The city of College Place has been developing an industrial complex or park for several years. Currently, there are two units sited Banner Bank and Gilberts autoplex. During the planning stage they were contacted and were presented information on high pressure liquid and natural gases. A fact sheet has been included as attachment A detailing the events of that meeting.

## COLLEGE PLACE INDUSTRIAL COMPLEX

The purpose of this presentation is to show what the City has done to prevent any serious condition in the event of a pipe failure. The picture shows what is on the ground and the distance between both buildings. It was suggested that a 600 ft. radius should be considered as a guideline between occupied buildings and high pressure pipeline. Reference was directed to the information provided in the handout which are covered in the fact sheet A.
