Cover Photos:

Top - Sylvia Lake Dam in Grays Harbor County in the Sylvia Creek drainage basin about 1 mile North of Montesano. The property is owned by Washington State Parks and Recreation Commission (State Parks) and was built for recreational purposes. This timber and concrete structure has dam buttresses or piers with concrete infills between each buttress. This dam has a concrete cut-off wall with a downstream grouted rock buttress on the right side of the dam. The principal spillway is located in the center concrete portion of the dam and is made up of five bays. It was originally constructed in 1901 with the most recent modifications occurring in 1995.

Bottom - Tumwater Falls Dam on the Deschutes River at flood stage. Located in Tumwater, Washington and built in 1900, the Tumwater Falls Dam is very picturesque seen from either side of the river.

This Inventory is Based on the Following Selected Counties and Dam Hazard Categories:

All 39 counties are listed. The results from your selection are highlighted in gray.

You have selected 39 of 39 Counties and 7 of 7 Hazard Categories. Applying these two filters, this inventory now contains 1233 dams from 39 counties out of 1233 regulated dams in Washington State.

Some counties may show a dam count of zero depending on the hazard category filters chosen. If this is the case, those counties will be highlighted in dark gray in the list to the right and their statistics will be excluded from the text and charts found in this report.

(See Figure 1 on page 7 for a sorted distribution.)

Dam Inventory - Introduction and Background

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Introduction

This Inventory of Dams is now an electronic report based on a series of publications describing the physical characteristics of regulated dams in Washington State. It represents a compilation of information that was first assembled in 1975 and has been maintained and updated since that time.

The full inventory contains 1233 regulated dams. These dams are defined as structures that can impound 10 acre-feet or more of watery material at the dam crest elevation. Past publications had also listed dams that had been removed or breached. This report only lists existing dams that are being operated that match your selection criteria. Figure 1 represents the number of inventoried dams by county.

As with any database, this inventory represents current conditions to the best of our knowledge. No warranty for the correctness, accuracy, or usefulness of this data is expressed or implied. If errors or inaccuracies are discovered, or if you have special accommodation needs, please contact the Dam Safety Office of Ecology at (360) 407-7122 (voice) or (360) 407-6006 (TDD).

Background

In 1972, the U.S. Congress passed Public Law 92-367 which authorized the development of a National Inventory of Dams. Subsequently in 1975, the Department of Ecology assembled the first dam inventory. This initial inventory was published May 1976 in WRIS Information Bulletin No. 28.

In the following years, this original inventory was updated with the assistance from the Seattle District office of the U.S. Army Corps of Engineers. In December 1981, the second Inventory of Dams in Washington State was published in a joint effort by the Department of Ecology and the State Energy Office.

In 1986, the U.S. Congress passed the Water Resources Development Act of 1986, Public Law 99-662, which reauthorized the fiscal support for the National Inventory of Dams. Monies provided by this source and administered by the Association of State Dam Safety Officials (ASDSO) have augmented ongoing efforts to maintain and update the Washington inventory.

This inventory is now available electronically. The Dam Inventory Report can be requested from Gus Ordonez, Dam Safety Lead Engineer at gord461@ecy.wa.gov.

Ecology - Water Resources - Dam Safety Background

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Water Resources Program - Dam Safety Office

Under state law, the Department of Ecology (Ecology) is responsible for regulating dams that capture and store at least 10 acre-feet (about 3.2 million gallons) of water or watery materials such as mine tailings, sewage and manure waste. Ecology's Dam Safety Office currently oversees 1088 of 1233 dams across the state. Through plan reviews and construction inspections, the agency helps ensure these facilities are properly designed and constructed. To reasonably secure the safety of human life and property, Ecology also conducts inspections of existing dams to assure proper operation and maintenance.

The 145 Federal dams not overseen by Ecology are exempted by Washington State regulation WAC 173-175-020, but they will be included in this report if they meet your search criteria.

Water Resources Historical Background

In Washington State, dam safety concerns were part of the normal water-rights duties in the state departments of Conservation and Development and Water Resources. In 1970, dam safety regulations were transferred to the newly created Department of Ecology. In the early 1980s, a separate Dam Safety Office was formed to concentrate on dam issues, primarily in response to the National Dam Safety Act in 1977. In 1990, Ecology's Dam Safety Office was reorganized and initiated its first long-range planning for improving dam safety in Washington.

Characteristics of Dams in Washington

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Reservoir Purposes

Dams and reservoirs in Washington are constructed for a variety of purposes. From the Washington counties and hazard categories selected for this report, about 6% of the dams are constructed for domestic water supply, 24% for irrigation, and another 23% of the dams are built for recreation. The remaining 47% of the dams provide a wide variety of functions including: water quality, hydropower, flood control, and mine tailings storage. In addition, the larger reservoirs are commonly multi-purpose and serve a number of functions. See Bar Chart 3 in the Characteristic Charts of Dams in Washington section for more details.

Dam Height

The height of the dams also varies widely. Dams in Washington are categorized as small, intermediate, or large for purposes of setting design criteria, identifying acceptable construction methods and scheduling periodic inspections. From the Washington counties and hazard categories selected for this report, 588 dams are classified as Small, 530 are classified as Intermediate, and 111 are classified as Large. Also see Table 2 in the Dam Classification and Code Tables section, at the end of the document, just before the Index and Bar Chart 5 in the Characteristic Charts of Dams in Washington section for additional details.

Dam Type

The inventory includes dams of various types. The majority are of earth fill construction. The remainder are largely concrete structures. See Bar Chart 2 for a more detailed breakdown.

Dam Ownership

As there are a wide variety of dam and reservoir purposes, there is a correspondingly wide category of dam owners. To help delineate the types of owners, they have been separated into five categories: private, local government, public utilities, federal, and state. From the Washington counties and hazard categories selected for this report, 58% of the dams are privately owned and many of these are for recreational purposes. Another 29% are owned by local governments and public utilities or irrigation districts for water supply, flood control, or hydropower purposes. See Bar Chart 4 in the Characteristic Charts of Dams in Washington section for more details.

Downstream Hazard Classification

The Downstream Hazard Classification system used in Washington (Table 1.) is similar to the types of classification systems used throughout the United States. The purpose of the system is to provide a simple characterization of the setting downstream of a dam to reflect the general nature of consequences if the dam were to fail and release the reservoir into the downstream valley. It is not intended, nor does it; reflect the condition or operational characteristics of the dam. The percentage of dams in each hazard category is shown in Bar Chart 6 in the Characteristic Charts of Dams in Washington section.

Characteristics of Dams in Washington by Selected Counties and Hazard Categories

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Bar Chart 1. Dam Counts by County

Bar Chart 2. Dam Construction Types

Characteristics of Dams in Washington by Selected Counties and Hazard Categories

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Bar Chart 3. Dam Purposes

Bar Chart 4. Dam Ownership

Characteristics of Dams in Washington by Selected Counties and Hazard Categories

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Bar Chart 5. Dam Sizes by Height

Please Note: Dams without a recorded structural height are excluded from the above table. This will cause the total number of dams reported in this table to differ from the total number of dams contained in the Inventory of Dams. It will also cause the combined percentages to total to less than 100%.

Bar Chart 6. Dam Hazard Categories (Population at Risk)

2* Legacy classification, in the process of parsing all 2's into 2D's (population at risk of 1 to 6) and 2E's (0 population at risk but significant economic and/or environmental effects)

Definitions of Dam Inventory Terminology

Crest Length

The crest length of the dam is listed to the nearest foot. Crest length is defined as the total horizontal distance measured along the axis of the dam at the elevation of the top of the dam between abutments or ends of the dam. Where applicable, this includes the spillway, powerhouse sections, and navigation locks where they form a continuous part of the water retaining structure.

Dam Height

The dam height is measured to the nearest foot. Dam height is defined as the vertical distance between the lowest point on the dam crest and the streambed elevation. If the dam is not across a stream or water course, the height is referenced from the lowest elevation of the outside limit of the barrier.

Dam Location

Latitude Longitude - The geographical location of the maximum section of the dam is listed by latitude and longitude in decimal degrees.

SEC-TWP-RGE - The government land subdivision within which the dam is located is listed by section, subsection, township north of the Willamette Base Line, and range east or west of the Willamette Meridian. The subsection location is identified by a letter according to the following scheme:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Quarter Quarter

Downstream Hazard Category

An alpha-numeric code used as an index of the potential consequences in the downstream valley IF the dam were to fail and release the reservoir.

1A	= Greater than 300 lives at risk	<i>High</i>
1B	= From 31 to 300 lives at risk	<i>High</i>
1C	= From 7 to 30 lives at risk	<i>High</i>
2 *	= From 1 to 6 lives at risk	<i>Significant</i>
2D	= From 1 to 6 lives at risk	<i>Significant</i>
2E **	= No lives at risk **	<i>Significant</i>
3	= No lives at risk	<i>Low</i>

* Legacy classification, parsing all 2's into 2D's and 2E's

** Significant economic or environmental risk

Drainage Area

The combined area of the tributary watershed and reservoir surface that can contribute runoff to the dam and reservoir, measured in square miles.

Impoundment Name

The official or more commonly known name of the dam.

Maximum Discharge

The discharge rate of the spillway measured in cubic feet per second (cfs), when the reservoir is at its maximum designed water surface elevation.

Name of Owner

The name or abbreviated name of the dam owner, identified as the current owner from existing records and/or recent field investigations.

Definitions of Dam Inventory Terminology

National ID

The National ID is a sequential identification number assigned to each dam as it is entered in the inventory and is the same number used in the National Inventory of Dams. The National Inventory containing all dams in the United States may be obtained on CD-ROM from the Federal Emergency Management Agency (FEMA).

Normal Surface Area

The surface area measured in acres when the reservoir is at its normal operating level.

Reservoir Purpose(s)

Combinations of single letter codes are used to describe the purpose or purposes for which the reservoir is used:

<u>Purpose</u>	<u>Code</u>
Debris Control	D
Flood Control and Storm Water Management	C
Fish and Wildlife	F
Grade Stabilization	G
Hydroelectric	H
Irrigation	I
Navigation	N
Other	O
Fire Protection, Stock, or Small Farm Pond	P
Water Quality	Q
Recreation	R
Water Supply	S
Tailings	T

River or Stream

The official name of the river or stream on which the dam is built. If the stream is unnamed, it is listed as being a tributary to a downstream named stream; i.e., Tr-Skagit River. If the dam is not located on a defined stream channel, it is listed as being Offstream a named stream.

State ID

The State ID is an alpha-numeric identification number used by Ecology for internal filing and tracking of the dam.

Storage Capacity

Maximum

Maximum storage capacity is the total reservoir volume below the maximum attainable water surface elevation.

Normal

Normal storage capacity is the total reservoir volume below the normal retention level.

Definitions of Dam Inventory Terminology

Type of Dam

Combinations of two-letter codes are used to describe the type of dam construction:

<u>Type</u>	<u>Code</u>
Concrete	CN
Concrete Buttress	CB
Concrete Gravity	PG
Concrete Multiple Arch	MV
Concrete Single Arch	VA
Earth Fill	RE
Masonry	MA
Other Type	OT
Rock Fill	ER
Some Access	SA
Stone	ST
Timber	TI

WRIA

Water Resource Inventory Area (WRIA) is a geographic unit within the state, each of which is a major drainage basin or incorporates several smaller drainages. There are 62 WRIA's in the state. They are identified both by name and by number. The number of the WRIA within which each dam is located is identified in the inventory.

Year Completed

The year in which the main dam structure was originally constructed.

Dam Classification and Code Tables

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Table 1. Dam Hazard Classification				
Downstream Hazard Potential	Downstream Hazard Category	Population at Risk	Economic Loss General Description	Environmental Damage
Low	3	0	Minimal. No inhabited structures. Limited agricultural development.	No deleterious material in reservoir contents.
Significant	2	1 - 6	Appreciable. 1 or 2 inhabited structures. Notable agriculture or work sites. Secondary highway and/or rail lines.	Limited water quality degradation from reservoir contents and only short term consequences.
Significant	2D	1 - 6	Appreciable. 1 or 2 inhabited structures.	Limited water quality degradation from reservoir contents and only short term consequences.
Significant	2E	0	Appreciable. Notable agriculture or work sites. Secondary highway and/or rail lines.	Limited water quality degradation from reservoir contents and only short term consequences.
High	1C	7 - 30	Major. 3 to 10 inhabited structures. Low density suburban area with some industry and work sites. Primary highways and rail lines.	Severe water quality degradation potential from reservoir contents and long term effects on aquatic and human life.
High	1B	31 - 300	Extreme. 11 to 100 inhabited structures. Medium density suburban or urban area with associated industry, property, and transportation features.	Severe water quality degradation potential from reservoir contents and long term effects on aquatic and human life.
High	1A	More than 300	Extreme. More than 100 inhabited structures. Highly developed, densely populated suburban or urban area with associated industry, property, transportation, and community life line features.	Severe water quality degradation potential from reservoir contents and long term effects on aquatic and human life.

Dam Classification and Code Tables

Counties: 39/39, Hazard Categories: all, Dams: 1233/1233

Table 2. Dam Height Classification			
Dam Class Size	Dam Height	Dam Count	Dam Percentage
Small	0 - 14 Feet	588	47.69 %
Intermediate	15 - 49 Feet	530	42.98 %
Large	50 Feet or more	111	9.00 %

Please Note: Dams without a recorded structural height are excluded from the above table. This will cause the total number of dams reported in this table to differ from the total number of dams contained in the Inventory of Dams. It will also cause the combined percentages to total to less than 100%.

Table 3. Dam Purpose Codes	
Code Description	Code
Flood Control and Storm Water Management	C
Debris Control	D
Fish and Wildlife	F
Grade Stabilization	G
Hydroelectric	H
Irrigation	I
Navigation	N
Other	O
Fire Protection, Stock, or Small Farm Pond	P
Water Quality	Q
Recreation	R
Water Supply	S
Tailings	T

Table 4. Dam Type Codes	
Code Description	Code
Concrete Buttress	CB
Concrete	CN
Rock Fill	ER
Masonry	MA
Concrete Multiple Arch	MV
Other Type	OT
Concrete Gravity	PG
Earth Fill	RE
some access	SA
Stone	ST
Timber	TI
Concrete Single Arch	VA
