A completed **Standard Inspection Checklist, OQ Field Validation Protocol form and Cover Letter/Field Report** are to be submitted to the Chief Engineer within **30 days** from completion of the inspection.

Inspection Report							
Inspection ID/Docket Nu	mber	5852					
Inspector Name & Submit Date		Dennis Ritter October 31, 2014					
Chief Eng Name & Review/Date		Joe Subsits, November 10, 2014					
		Operator Information					
Name of Operator:	Puget	t Sound Energy			22189		
Name of Unit(s):	East K	ling					
Records Location:	Bellev	rue, Georgetown (Seattle),					
Date(s) of Last (unit)	March	1 20-23, 2012		September 3	30-Oct 3, 2014		
Inspection: Marc		ch 26-29, 2012 Inspection Date(s):			9, 2014		
	And A	April 6, 2012 October 14-15			-15, 2014		

Inspection Summary:

The 2014 Std Inspection for PSE East King Unit was conducted in King County. Records were also reviewed in Pierce and King County on the dates noted above. An exit interview was held at PSE's office in Bellevue on October 15, 2014.

Field inspections locations are as noted in the inspection form. Records were reviewed at PSE's Georgetown Operating Bases, PSE Headquarters in Bellevue and leak records were reviewed in Lakewood (Infrasource Operating Base). Additionally, some records were reviewed at WUTC's office prior to field visit. Field and OQ assessments were conducted as follows: CP pipe to soil, isolation, and rectifier inspections; bridge and steep slope/slide patrols; pressure regulator and relief lock-up; block valve operation; odorizer station check:

6-Regulator stations (this inspection focused on gate stations) and associated valves

4-Odorant station

6-Rectifiers

1-isolation test point

5-bridge patrols

2-slide patrols

4-Industrial meters—Paccar Renton, Genie Redmond, Red Hook Brewery Woodinville, Molbak's Nursery Woodinville

7 construction projects were reviewed:

109068386-Eastgate RS 2734 Bellevue, WA

109050511-Novelty Hill Evans Creek Bridge replacement Redmond WA

108555270-6"STW Relocate Auburn, WA

109077284-Lake Forest Park, WA

109074704-RS 2513 Upgrade Kingsgate Woodinville, WA

109082577-16" HP Relocate, Tukwila, WA

109077577-17th Street, Auburn, WA

This inspection also had one Infrasource crew inspection on a construction project in Snoqualmie, WA. OQ: welding certs, tapping, P/S. Also checked exposed pipe condition report and steel pipe removed from service.

The inspection revealed the following potential issues: *148*) *480-93-188 Gas leak surveys*

(3) Each gas pipeline company must conduct gas leak surveys according to the following minimum frequencies:

(c) Gas pipelines operating at or above two hundred fifty psig - at least once annually, but not to exceed fifteen months between surveys;

- In 2012, PSE failed to leak survey the following plats for the HP 250 Kent Black Diamond Supply Main: 223079C, 223079D, 223079E, 224078, 225075, 225075, 226076, 226076, 226077, 226078, 227077, 227078
- In 2013, PSE failed to leak survey the HP 16" and IP 8" for Plat 183097

S – Satisfactory U – Unsatisfactory N/A – Not Applicable N/C – Not Checked If an item is marked U, N/A, or N/C, an explanation must be included in this report.

Inspection Summary:

159) 192.721 Distribution systems: Patrolling..

(b) Mains in places or on structures where anticipated physical movement or external loading could cause failure or leakage must be patrolled -

(1) In business districts, at intervals not exceeding 4 1/2 months, but at least four times each calendar year; and

(2) Outside business districts, at intervals not exceeding 7 1/2 months, but at least twice each calendar year.

• In February, 2014, WUTC discovered a pipeline on the bridge at Jenkins Creek on Covington Way in Covington. PSE confirmed this crossing was not on their bridge patrol list. The bridge had not been patrolled per the code or PSE Gas Operating Standing 2575.3100.4.2 as required. Previous issue in other inspections. Need to have PSE explain how they will ensure they know of all bridge crossings.

•

178) 192.455 External corrosion control: Buried or submerged pipelines installed after July 31, 1971.

(2) It must have a cathodic protection system designed to protect the pipeline in accordance with this subpart, installed and placed in operation within 1 year after completion of construction.

• During the leak record inspection, all corrosion records were reviewed. One record for a leak at 4625 S. 289th Pl Auburn, was shown on PSE's mapping system as a PE service and on the D4 card as a plastic service. In reality, the service was PE up to the riser, where it transitioned to steel. This portion of the service did not have cathodic protection per the code. The concern is that other services in this area may be constructed similarly as most of the homes appear to be built in 1977 era by Hillis Homes.

Operator Qualification Field Validation

Important: Per OPS, the OQ Field Inspection Protocol Form (Rev 4, May 2007) shall be used by the inspector as part of this standard inspection. When completed, the inspector will upload this information into the PHMSA OQ Database (OQDB) located at <u>http://primis.phmsa.dot.gov/oqdb/home.oq</u> **Date Completed/Uploaded**

Integrity Management Field Validation

Important: Per PHMSA, IMP Field Verification Form (**Rev 6/18/2012**) shall be used by the inspector as part of this standard inspection. When completed, the inspector will upload this information into the PHMSA IM Database (IMDB) located at http://primis.phmsa.dot.gov/gasimp/home.gim **Date Completed/Uploaded:**

			COMPRESSOR STATIONS INSPECTION (Field)	S	U	N/A	N/C
			(Note: Facilities may be "Grandfathered")	<u> </u>			
266.			- Discharge blowdown gas to a safe location	<u> </u>			
267.			- Block and blow down the gas in the station				
268.			 Shut down gas compressing equipment, gas fires, electrical facilities in compressor building and near gas headers 				
269.			- Maintain necessary electrical circuits for emergency lighting and circuits needed to protect equipment from damage				
270.			ESD system must be operable from at least two locations, each of which is:				
271.	.167		- Outside the gas area of the station				
272.			- Not more than 500 feet from the limits of the station				
273.			- ESD switches near emergency exits?				
274.		(b)	For stations supplying gas directly to distribution systems, is the ESD system configured so that the LDC will not be shut down if the ESD is activated?				
275.		(c)	Are ESDs on platforms designed to actuate automatically by				
276.			- For unattended compressor stations, when:				
277.			The gas pressure equals MAOP plus 15%?				
278.			An uncontrolled fire occurs on the platform?				
279.			- For compressor station in a building, when			1	
280.			An uncontrolled fire occurs in the building?		<u> </u>	<u> </u>	<u> </u>
281.			 Gas in air reaches 50% or more of LEL in a building with a source of ignition (facility conforming to NEC Class 1, Group D is not a source of ignition)? 				
282.	.171	(a)	Does the compressor station have adequate fire protection facilities? If fire pumps are used, they must not be affected by the ESD system.				
283.		(b)	Do the compressor station prime movers (other than electrical movers) have over-speed shutdown?				
284.		(c)	Do the compressor units alarm or shutdown in the event of inadequate cooling or lubrication of the unit(s)?				
285.		(d)	Are the gas compressor units equipped to automatically stop fuel flow and vent the engine if the engine is stopped for any reason?				
286.		(e)	Are the mufflers equipped with vents to vent any trapped gas?				
287.	.173		Is each compressor station building adequately ventilated?				
288.	.457		Is all buried piping cathodically protected?				
289.	.481		Atmospheric corrosion of aboveground facilities				
290.	.603		Does the operator have procedures for the start-up and shut-down of the station and/or compressor units?				
291.			Are facility maps current/up-to-date?				
292.	.615		Emergency Plan for the station on site?				
293.	.619		Review pressure recording charts and/or SCADA				
294.	.707		Markers				
295.	.731		Overpressure protection – relief's or shutdowns				
296.	.735		Are combustible materials in quantities exceeding normal daily usage, stored a safe distance from the compressor building?				
297.			Is aboveground oil or gasoline storage tanks protected in accordance with NFPA standard No. 30 ?				
298.	.736		Gas detection – location
